DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 16 and 19, drawn to neurotrypsin and the first method of use of neurotrypsin.

Group 2, claim(s) 17-18, drawn to nucleotides and use of the nucleotides for the production of proteins.

Group 3, claim(s) 20, drawn to use of species-homologous proteins for the development of pharmaceutical drugs.

Group 4, claim(s) 21, drawn to use of the proteins for the structure determination.

Group 5, claim(s) 22, drawn to use of compounds for the prediction of protein structure.

Group 6, claim(s) 23, drawn to use of the compounds for the development of pharmaceutical drugs.

Group 7, claim(s) 24, drawn to use of the compounds for gene therapy.

Group 8, claim(s) 25, drawn to use of the compounds for cell engineering applications.

Group 9, claim(s) 26, drawn to use of the compounds for antibodies production.

Group 10, claim(s) 27, drawn to use of the compounds for production of transgenic animals.

Group 11, claim(s) 28, drawn to use of the compounds for gene targeting techniques.

Art Unit: 1646

Group 12, claim(s) 29, drawn to use of the compounds for the diagnostic of disorders.

Group 13, claim(s) 30, drawn to use of the compounds for production of gene therapy vectors.

The inventions listed as Groups 1-13 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of Group 1 is the neurotrypsin protein. The first method of use is found in claim 19, therefore, this defines a single invention according to PCT Rule 13.1. Groups 2-13 are directed to either compounds which lack the special technical feature of the neurotrypsin protein or are directed to additional methods.

2. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Neurotrypsin of the human and neurotrypsin of the mouse.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after
